

Q-ADRA Project Promotes First Urban Lung in San Jose

On June 5th, over 100 volunteers came to the event to be participants in the creation of the First Urban Lung organized by the Municipality of San Jose through the technicians and professionals of the Urban Greening Program (PLANARBU), Q-ADRA Project, MINAET, and EARTH.

This planned and commemorative tree planting represents an effort, example, and hope for the future, and at the same time a concrete and effective action to mitigate greenhouse gases, restore and improve the surroundings and its scenic beauty, air quality, and involve community in environmental projects.

This activity was attended by the Deputy Minister of Environment, Ana Lorena Guevara, representatives for public and private institutions, as well as for the Q-ADRA Project, and private individuals.
